Reduction in blinding glare

The Skin Cancer Foundation recommends this product as an effective UV filter for the eyes and surrounding skin.

\*Compares Coppertone gray and green to competitive gray and green.

# Protect your Patients this winter

**Coppertone®**

LENSES BY VISION EASE

## The Problem

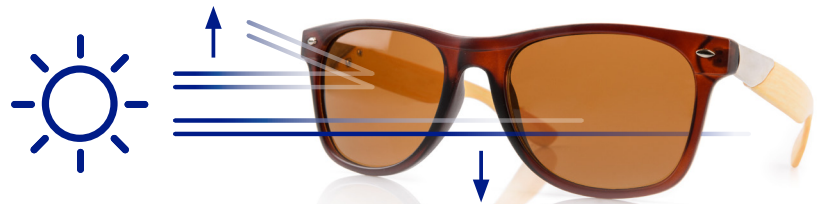

Overexposure to UV light may increase the risk of developing skin cancer. Exposure to Solar Blue Light and UV light may also be a contributing factor to several eye maladies, including cataracts and macular degeneration. Plus, UV rays may contribute to premature skin aging.

## The Solution

Take a strong stance on Solar Blue Light and UV protection for all your patients through education and a recommendation for lenses with added protection from Solar Blue Light and UV light. Protect your patients with Coppertone® Polarized Lenses.

**Every day we encounter harmful Solar Blue Light and UV Light.**

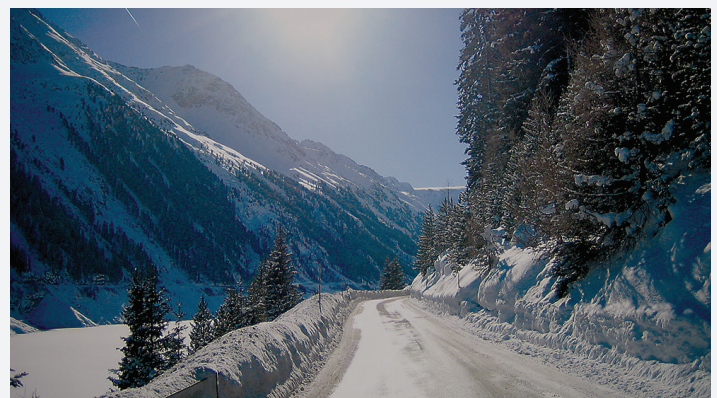

Harmful UVA and UVB rays blocked.

Harmful Solar Blue Light filtered out while non-harmful light passes through, allowing good color perception.

Without Polarized Lens

With Polarized Lens

Without adequate protection, sun glare not only endangers drivers' safety, but also creates a vision-health hazard for winter outdoor enthusiasts.
